

GreenPark Reading Station

Location: Reading, Berkshire
Client: Laing Rail and Prudential Property Investment Managers Ltd
Architect: PRP
Engineer: PBA

Project Description

New railway station and public transport interchange incorporating rail, bus, future MRT systems and Park & Ride. The station is a key component of the proposed GreenPark Village development and will be the first privately financed, permanent railway station in the south-east for 50 years.

The development will provide transport links for GreenPark Business Park, Madejski Stadium, Copthorne Hotel and existing and future residential developments. A range of transport options will be created by rail links to the national rail network, new public transport services to Reading Town Centre as well as access to the Sustrans national cycle network.

The new interchange will provide a more sustainable choice of travel to the residential and business communities of South Reading.
